Job/ Task	Operating Compressed Air Equipment.	Date: June 2020
-----------	--	-----------------

Equipment: Compressor Air Line & Gauge
--

Procedure incorporates Best Practice. (Tyre Inflation and use of compressors)

1. In all situations use all round safety awareness
2. At the roadside report to the vehicle driver and discuss what actions are required.
3. At the customers site report to site representative (or driver) and discuss what actions are required.
4. Wear the appropriate PPE. Including any additional site requirements.
5. Think safety before using compressed air and beware of dangers of explosions
6. Safety equipment must be used at all times (Safety cage-Depot. All airlines must 3m long before gauge)
7. Horseplay/Messing Un-professional behaviour is strictly prohibited at all times.
8. Ensure prior to carrying out this operation that all customers/members of the public are situated safely away from the area of work.
9. On completion, good housekeeping is essential remove all equipment and store.

Note: All compressors are service according to manual plus checked by an insurance assessor every 24mths. Air gauges checked every 6mts for calibration.

Internal Use;
